

# AVIGILON™

## Ally: comprehensive security incident and records management software

### Simplify incident management

Security operations organizations grapple with rising numbers of physical security incidents. Adding to that challenge are high levels of staff turnover, potential liability exposure as well as an exploding volume of incident data and types. It's easy to see why they need a security incident management solution that works hard for security operations so they can be empowered to focus on doing what they do best.

### Security challenges

- Rising numbers of security incidents
- Staff turnover and system training issues
- Liability exposure
- Volume of data and records
- Accuracy of incident response
- Security check complexity
- Limited, outdated incident management systems

# Ally works for you

## Easy to use and implement

Depending on the size of your organization, Ally can be implemented and ready to use in as little as three hours. Ally's user-friendly design makes it easy to train employees online in as little as one hour, even those with little or no software experience.

## Easy to communicate

Ensure your team stays connected with fast, secure and reliable voice communication and information sharing across workstations, smartphones and radios. Equip your field personnel with the devices and networks you prefer: MOTOTRBO professional two-way radio, WAVE two-way radio, smartphone or tablet. For dispatch and management, see where resources are located in real-time, improving response time and efficiency.

## Easy to notify

In the event of an emergency, such as a hazardous material spill, inclement weather or an active shooter, Ally's mass notification capabilities get the critical information to the right people quickly and accurately. Using the same security software for your incident management and mass notification saves you money and streamlines critical operations.

## Easy to report

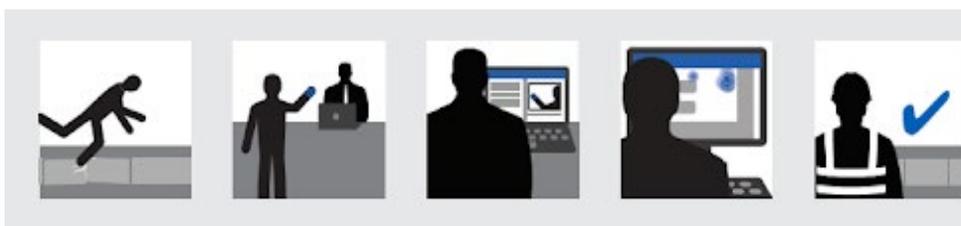

Enhance decision-making with embedded analytics and reports for fast trend analysis, proactive security planning and reduced liability. Customizable fields help you efficiently collect data and complete accurate reports. Daily activity logs and other built-in analytics summarize the data in your system to identify trends, adjust responses and report to stakeholders.

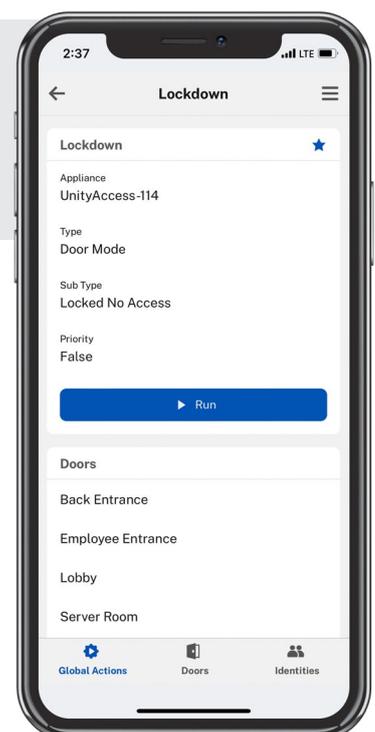

## Enhanced decision making

An employee stumbles on a large crack in the sidewalk and bloodies his hand when he catches himself. He reports the incident to security. Security personnel log the incident into Ally. When management runs a periodic incident report, they can clearly see using Ally's map-based analytics features that this wasn't the first fall in that specific location.

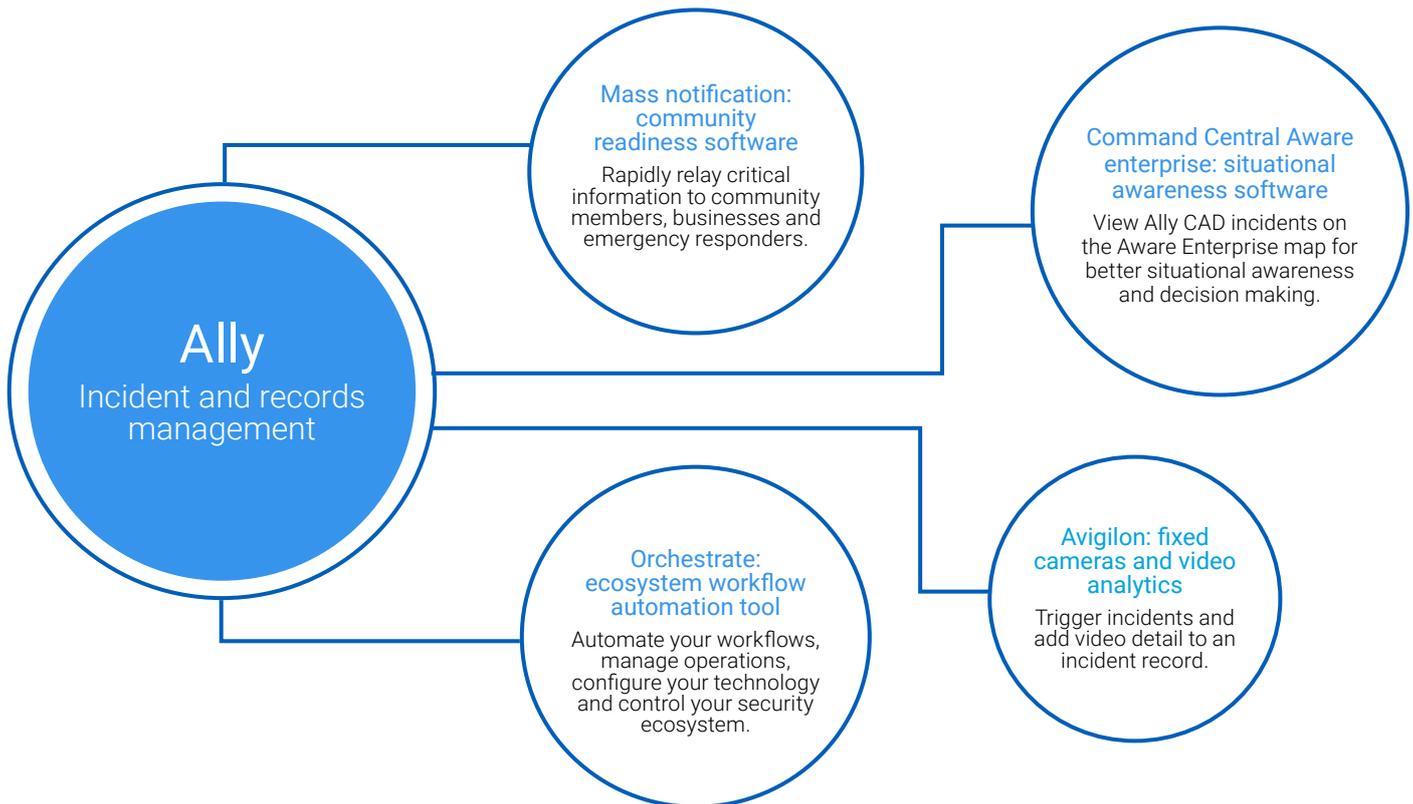

## Avigilon solutions integration

Instantly receive any of the alarms configured from Unity, Alta and the Motorola Solutions ecosystem. Real-time alerts triggered in Orchestrate create a record and allows you to add additional relevant information directly to the incident record.

# Expand capabilities and maximize investments

Because the ecosystem is modular and customizable, you can choose the solutions that best suit your needs and add to it when the time is right for your organization – while maximizing the value of your existing investments.

## Motorola Solutions is solving for safer.

We build and connect technologies to help protect people, property and places. Our solutions enable the collaboration between public safety agencies and enterprises that's critical for a proactive approach to safety and security. Learn more about how we're solving for safer communities, safer schools, safer hospitals, safer businesses – safer everywhere
